

ABSTRACT

An electronically-enabled encasement for a handheld computer is provided.

The encasement includes an encasement portion configured to cover at least a portion of the handheld computer, including a front surface of the handheld

- 5 computer providing access to a display; a spine engageable with an accessory slot of the handheld computer to detachably couple the encasement with the handheld computer; a connector to electronically connect the encasement to the handheld computer; and at least one electronic component embedded in the encasement portion. The encasement may also include a wireless communication port such a
- 10 radio frequency transmitter or an IR transceiver.
